

NEW BRUNSWICK
DELICIOUSLY CANADIAN

FRESH BY NATURE

Deliciously Canadian

OYSTERS

Crassostrea Virginica

- Longest shelf-life of any oysters on the planet.
- 100% natural and unique to their environment.
- Rich variety of taste and characteristics.
- Excellent source of zinc to support a healthy immune system.

New Brunswick's rich, secluded bays create the perfect conditions for a variety of high-quality oysters to thrive. The icy cold waters and harsh winters make them resilient, which contributes to their extended shelf life. The result is unique oysters that offer deliciously consistent quality and taste year-round.

Grown using leading technology in the harsh and cold Atlantic waters, our oysters provide a long-lasting quality product without compromising taste and yield. New Brunswick is a leader when it comes to producing safe, quality oysters. Reliability means oysters grown to the highest standards in the world with industry-leading technology.

A pioneer in the oyster industry, New Brunswick sets the bar when it comes to producing safe and consistent oysters that appeal to the consumer's appetite. Long before oysters became the popular delicacy they are today, New Brunswickers were innovating and refining oyster farming to ensure it was sustainable for future generations.

If you're looking for high-quality, safe and delicious oysters, look no further than New Brunswick.
